the work reported on consists of both data tables projects and scientific documentation efforts the data tables projects are on the thermal conductivity specific heat thermal radiative properties emittance reflectance absorptance

transmittance thermal diffusivity and thermal linear and volumetric expansion of elements ferrous and nonferrous alloys intermetallic semiconducting and nonmetallic compounds cermets ceramics mixtures composites systems polymers etc and on the thermal conductivity specific heat and viscosity of fluids and fluid mixtures author

protocols for nucleic acid analysis by non radioactive probes second edition provides a firm background on the basic preparative protocols required for the analysis of nucleic acids by nonradioactive methods presenting the methodologies using amazing new applications this volume offers guide chapters on nucleic acid extractions preparation of nucleic acid blots and labeling of nucleic acids with nonradioactive haptens new fluorescent techniques such as real time pcr and microarrays are also included allowing users to get a nonradioactive protocol implemented in the laboratory with minimum adaptation required and fastest time to results the protocols follow the successful methods in molecular biologytm series format each offering step by step laboratory instructions an introduction outlining the principles behind the technique lists of the necessary equipment and reagents and tips on troubleshooting and avoiding known pitfalls

there has always been some tension between proponents of hypothesis driven and discovery driven research in the broad field of life sciences academic research has been primarily focused on hypothesis driven research however the success of the human genome project a discovery driven research approach has opened the door to adding other types of discovery driven research to a continuum of research approaches in contrast drug discovery research in the pharmaceutical industry has embraced discovery driven research for many years a good example has been the discovery of active compounds from large chemical libraries through screening campaigns the success of the human genome project has also demonstrated the need for both academic researchers and industrial researchers to now understand the functions of genes and gene products the cell is the basic unit of life and it has been at the cellular level where function can be demonstrated most cost effectively and rapidly high content screening hcs was developed by cellomics inc in the mid 1990s to address the need for a platform that could be used in the discovery driven research and development required to understand the functions of genes and gene products at the level of the cell

with the advent of high throughput technologies following completion of the human genome project and similar projects the number of genes of interest has

expanded and the traditional methods for gene function analysis cannot achieve the throughput necessary for large scale exploration this book brings together a number of recently developed techniques for looking at gene function including computational biochemical and biological methods and protocols

protein phosphatase protocols presents a broad range of protocols for the study of protein phosphatases all written by experts and innovators from phosphatase laboratories around the world this volume is a compendium of resources for the study of protein phosphatases and their potential as drug targets experimental methodologies are taken from proteomics bioinformatics genomics biochemistry rna and genetics

pharmaceutical preformulation and formulation a practical guide from candidate drug selection to commercial dosage form reflects the mounting pressure on pharmaceutical companies to accelerate the new drug development and launch process as well as the shift from developing small molecules to the growth of biopharmaceuticals the book meets the ne

molecular biology has driven a powerful reductionist or molecule centric approach to biological research in the last half of the 20th century reductionism is the attempt to explain complex phenomena by defining the functional properties of the individual components of the system bloom 1 has referred to the post genome sequencing era as the end of naïve reductionism reductionist methods will continue to be an essential element of all biological research efforts but naïve reductionism the belief that reductionism alone can lead to a complete understanding of living organisms is not tenable organisms are clearly much more than the sum of their parts and the behavior of complex physiological processes cannot be understood simply by knowing how the parts work in isolation systems biology has emerged in the wake of genome sequencing as the successor to reductionism 2 5 the systems of systems biology are defined over a wide span of complexity ranging from two macromolecules that interact to carry out a specific task to whole organisms systems biology is integrative and seeks to understand and predict the behavior or emergent properties of complex multicomponent biological processes a systems level characterization of a biological process addresses the following three main questions 1 what are the parts of the system i e

this book provides key methods approaches and strategies to dissect the plant

defense response addressing methods to identify and characterize plant resistance genes as well as pathogen associated molecules that trigger the plant defense response this volume creates a better understanding of the interactions between pathogens and their hosts this will help to develop better methods for disease control in plants and animals

originally published in 1963 this text provides a major revision of the first edition it is devoted to the feldspar minerals incorporating the advances in knowledge and understanding arising from the new and improved techniques for the study of minerals that have developed over the decades between editions the authors have set out to maintain the general approach used in the other volumes summarizing important research results and presenting them in an organized fashion
