merging evolutionary ecology and cognitive science cognitive ecology investigates how animal interactions with natural habitats shape cognitive systems and how constraints on nervous systems limit or bias animal behavior research in cognitive ecology has expanded rapidly in the past decade and this second volume builds on the foundations laid out in the first published in 1998 cognitive ecology ii integrates numerous scientific disciplines to analyze the ecology and evolution of animal cognition the contributors cover the mechanisms ecology and evolution of learning and memory including detailed analyses of bee neurobiology bird song and spatial learning they also explore decision making with mechanistic analyses of reproductive behavior in voles escape hatching by frog embryos and predation in the auditory domain of bats and eared insects finally they consider social cognition focusing on alarm calls and the factors determining social learning strategies of corvids fish and mammals with cognitive ecology ascending to its rightful place in behavioral and evolutionary research this volume captures the promise that has been realized in the past decade and looks forward to new research prospects

publishes original research papers from the disciplines of psychology biology neuroscience and medicine that contribute to an understanding of behavior development research that focuses on development in the embryo fetus neonate juvenile or adult animal and multidisciplinary research that relates behavioral development to anatomy physiology biochemistry genetics or evolution is appropriate the journal represents a broad phylogenetic perspective on behavior development by publishing studies of invertebrates fish birds humans and other animals

attention is a central concept in psychology the term attention itself has persisted even though it implies a static insulated capacity that we use when it is necessary to focus upon some relevant or stimulating event riess jones presents a different way of thinking about attention one that describes it as a continuous activity that is based on energy fluctuating in time a majority of attention research fails to examine influence of event time structure i e a speech utterance on listeners moment to moment attending general research ignores listeners endowed with innate as well as acquired temporal biases here attending is portrayed as a dynamic interaction of an individual within his or her surroundings importantly this interaction involves synchronicity between an attender and external events this emphasis on time and synchronicity distinguishes the author s theory called dynamic attending theory dat from other approaches to attending which characterize attention metaphorically as a filter resource pool spotlight and so on recent research from neuroscience has lent support to riess jones theory and the goal of this book is to bring this new research as well as her own to the wide audience of psychologists interested in attention more broadly
