death between an idea and its successful implementation it uniquely merges the technical and scientific aspects of some of the innovations that have been implemented across forensic science within the national and international landscape and with i the necessary considerations to take into account on the road to success such as business planning data privacy and legal and regulatory aspects ii the end users perspective and iii the industry perspective case studies illustrate what success looks like by discussing forensic innovations that have made it to the market and have subsequently impacted positively on criminal investigations this book acts as a platform to facilitate the dialogue between key stakeholders in driving innovation namely academia industry and end users as well as indicating a roadmap to facilitate practical developments whilst serving as a revolutionary springboard to initiate an innovation transforming paradigm shift this volume is a valuable contribution to the field and is of great interest to graduates and researchers engaged in forensic science forensic service providers and manufacturers as well as policymakers

forensic science combines analytical science with the requirements of law enforcement agencies and legislation this can often pose challenges within the development of novel analytical methods particularly with the drive to have more in field and in situ applications to facilitate the investigation of criminal cases this book will explore the specific challenges encountered by forensic scientists and the developments that are being made to address these within the framework of the legislative requirements it will provide a critical appraisal of the current challenges facing analytical approaches for the detection of forensic evidence and the state of the art technologies used to address these challenges providing an excellent combination of current research and how this pertains to forensic investigations the book will also highlight key obstacles within this ever changing environment aimed at graduates and forensic professionals this is a unique oversight of the current work being undertaken within the development of analytical methods and also in the interpretation of complex crime scene samples

high throughput sequencing technologies are widely used to study microbial ecology across species and habitats in order to understand the impacts of microbial communities on host health metabolism and the environment due to the dynamic nature of microbial communities longitudinal microbiome analyses play an essential role in these types of investigations key questions in microbiome studies aim at identifying specific microbial taxa enterotypes genes or metabolites associated with specific outcomes as well as potential factors that influence microbial communities however the characteristics of microbiome data such as sparsity and skewedness combined with the nature of data collection reflected often as uneven sampling or missing data make commonly employed statistical approaches to handle repeated measures in longitudinal studies inadequate therefore many researchers have begun to investigate methods that could improve incorporating these features when studying clinical host metabolic or environmental associations with longitudinal microbiome data in addition to the inferential aspect it is also becoming apparent that visualization of high dimensional data in a way which is both intelligible and comprehensive is another difficult challenge that microbiome researchers face visualization is crucial in both the analysis and understanding of metagenomic data researchers must create clear graphic representations that give biological insight without being overly complicated thus this research topic seeks to both review and provide novel approaches that are being developed to integrate microbiome data and complex metadata into meaningful mathematical statistical and computational models we believe this topic is fundamental to understanding the importance of microbial communities and provides a useful reference for other investigators approaching the field
