the dyadic adjustment scale das is a self report measure of relationship adjustment

first published in 1988 routledge is an imprint of taylor francis an informa company

now this updated and expanded two volume edition of fischer and corcoran s standard reference enables professionals to gather this vital information easily and effectively in measures for clinical practice volume 1 couples families and children and volume 2 adults joel fischer and kevin corcoran provide an extensive collection of over 320 rapid assessment instruments rais including questionnaires and scales which assess virtually any problem commonly encountered in clinical practice all instruments are actually reprinted in the book and are critiqued by the authors to aid in their selection the instruments included are brief and easy to administer and will be useful for all types of practice and all theoretical orientations

this book represents an up to date comprehensive survey of the major contemporary and cutting edge tools and strategies used in the clinical assessment of couples and families

this three volume handbook represents a significant and indispensable reference tool for those studying the family vol 1 contains full abstracts of 504 instruments plus abbreviated descriptions of another 472 basic scale construction issues can be examined through the combined use of vol 2 3 an excellent reference tool that will fulfil researchers and clinicians need for quality instrumentation

the purpose of this book is to review existing and developing family assessment methods relevant to the study of psycho pathology it is our intention not only to inform clinical re searchers of the many valuable family assessment methods that are available but also to encourage the incorporation of such procedures into future research efforts in so doing we believe that our understanding of the etiology course treatment and prevention of adult and childhood disorders will be greatly enriched the book begins with an overview of the larger social and intellectual forces which have led to the current interest in study ing family influences on psychopathology in children and adoles cence for each stream of influence we attempt to highlight theoretical and

methodological contributions relevant to the family's role in the etiology, exacerbation, and treatment of childhood disorders. Next, a framework for classifying family measurement procedures is introduced in which three major dimensions are emphasized: unit of analysis, source of data, and construct assessed. The third and most important chapter provides detailed reviews of a selected number of methods within each of the major groupings that have been delimited, references, and brief descriptions of other measures that cannot be reviewed in detail, and a discussion of the promising and developing techniques that are known to the authors.

published in 1996, the couple and family in managed care is a valuable contribution to the field of family therapy.

This correlational study attempted to determine if the outcome questionnaire can be used to collect the same information as the Revised Dyadic Adjustment Scale in marital assessment. Both measures are common pretreatment assessments and have relational components. The study used secondary data from the Utah State University Marriage and Family Therapy Clinic. Reliability and correlational tests were performed, and the results indicate that the assessments measure different constructs. There also were no statistically significant correlations when comparing the measures by gender, marital distress, and marital satisfaction. Implications are discussed, including the formulation of new clinical cut-off scores and the importance of using both measures to perform better assessments.

Family studies scholars describe the use in therapy of techniques for the assessment of family characteristics and problems. Each author was given an outline to follow in order that a wide range of theoretical or therapeutic approaches would be coherently presented. Evidence for the validity of each assessment technique, suggestions for its practical administration and interpretation, illustrations by case example of its function and utility, and the actual questionnaire itself or instructions on how to get it are provided. The use of third-party observers and techniques for getting information from the family itself about marital relations or the full family structure are described.

This is a re-issue of a classic study first published in 1990 of techniques for family measurement and assessment. It is published to coincide with two new volumes which take forward many of the original techniques and procedures.
